CLAUDE COMMUNITY SEATTLE · SUNDAY, OCTOBER 25, 2026

Impact Lab *Hackathon*

Build AI tools, workflows, and playbooks that small businesses can adopt.

One day at thinkspace Seattle. For small-business owners who know the problems, working professionals and students who want to build with Claude, and the technical builders who team up with them. Teams of 3 to 5 ship one thing a real business could put to work the following week, then open-source it.

Read(theme.md)

What you'll build

The theme is practical: AI tools, workflows, and playbooks a small business can adopt without hiring a developer. Judges ask whether it works, whether an owner could set it up from the README, whether it changes how the business runs, and whether it is something they had not seen before.

WHO'S IN THE ROOM

Owners/founders, professionals, students/grads, builders

A balanced team has at least one of each and someone hands-on with code.

WHAT SHIPS

A working tool with a README

Plus a repo and a demo video. Slides are optional; the demo is the point.

WHERE IT GOES

Open source, on GitHub

Every entry is public after the deadline, so a business can find it later.

All projects are open-sourced on GitHub, so team and entry pages are public.

● Read(schedule.md)

Agenda

SATURDAY, OCTOBER 24

4:30-6:30 pm	Team formation happy hour (optional)

SUNDAY, OCTOBER 25

9:00-9:45 am	Check-in, breakfast, team formation for anyone unmatched
▶ 10:30 am	**Start building (team formation closes)**
5:30 pm	**Submission deadline**
5:30-6:30 pm	Prelim judging during dinner
6:30-7:30 pm	Finals on stage: five 5-minute live demos plus Q&A
7:30 pm	Winners announced

● Grant(credits, max)

Prizes

$100 in Claude API credits

EVERY PARTICIPANT

One month of Claude Max 20x per person

WINNING TEAM

A one-year WTIA membership — WINNING TEAM

Tickets to the Seattle AI Week AI Summit and the AI Week Opening Reception (courtesy of WTIA) — TOP 3 TEAMS

Anthropic swag — TOP 3 TEAMS

The winning team receives up to $1,000 in prizes per person.

Review(entry, rubric)

Judging criteria

Five criteria, equal weight, each scored 1 to 8 with no middle. An entry's score is the mean across criteria, to one decimal. Five judges each score about four entries over dinner and send one to the final; all five score the finalists on stage.

CRITERION	1–2	3–4	5–6	7–8
Does it work	Didn't run or is slides only	Parts run; core flow incomplete	Core flow works with bugs or rough edges	Works end to end; a business could try it today
Ease of implementation for a small business	Needs a developer and custom setup	Needs technical help to get started	A motivated owner could set it up with the README	Plug-and-play; clear README, no code needed
Impact on the business's operations	Unclear who it helps or how	Helps a narrow task a little	Saves real time or money on a common task	Changes how a core part of the business runs
Creativity of the solution	Generic chatbot or template	Sensible but predictable	A fresh angle on a known problem	Something judges hadn't thought of
Teamwork Not everyone needs to write code: business,	One person did essentially everything, or no	One or two people did most	Clear roles; most members visibly contributed (code,	Every member had a distinct, visible role, and the team shows

CRITERION	1-2	3-4	5-6	7-8
design, research, and pitch roles count.	sign of who did what	of it; other roles unclear	design, business, research, or pitch)	how they worked together
